

ACCIÓN FORMATIVA

DURACIÓN: 20 horas

MODALIDAD: Online

FECHAS y HORARIO: 8 de Julio
a 12 de Julio de 9:30 a 13:30

CONTENIDOS

- Introducción.
- Bases de datos Relacionales.
- NoSQL.
- Redis.
- MongoDB.
- Apache Cassandra.
- Neo4J

PRESENTACIÓN

- NOMBRE Y UBICACIÓN
- EXPERIENCIA PREVIA CON BASES DE DATOS
- EXPERIENCIA PREVIA CON MONGODB
- EXPECTATIVAS DEL CURSO

MOTORES NOSQL

BASE DE DATOS DOCUMENTAL

MONGODB

- El gestor de base de datos MongoDB se lo puede asociar a un conjunto de gestores de bases de datos que no tienen como lenguaje principal el SQL para su manipulación.
- Los gestores de bases de datos NoSQL no requieren estructuras fijas como tablas, normalmente no soportan operaciones join y presentan como gran ventaja que pueden escalar en forma sencilla.

CARACTERÍSTICAS MONGODB

- Indexación
- Replicación
- Balanceo de carga
- Almacenamiento de archivos
- Agregación

A stack of books is shown on a wooden surface. The books are slightly out of focus, with the top book having a yellow cover. A bright, warm light source is visible in the upper left corner, creating a soft glow and lens flare effect across the scene.

JSON

```
{  
  codigo: 1,  
  nombre: 'El aleph',  
  autor: 'Borges',  
  editoriales: ['Planeta','Siglo XXI']  
}

MONGODB COMPASS

The screenshot displays the MongoDB Compass web interface. The left sidebar shows the database structure with 8 databases and 15 collections. The 'flightStats-cut' collection is selected. The main panel shows the collection name 'flightStats-cut' and a query filter of '{}'. The document count is 10.0k, with a total size of 6.5 MB and an average size of 684 B. The index count is 1, with a total size of 566.9 KB and an average size of 566.9 KB. A query returned 9,993 documents, based on a sample of 100 documents (1.00%). The interface displays three fields: '_id', 'arrivalAirport', and 'carrierFsCode'. Each field has a horizontal bar chart showing the distribution of values. The '_id' field is a string. The 'arrivalAirport' field is a string (100%). The 'carrierFsCode' field is a string. Below the fields, there is a section for 'codeshares' which is an array of documents with 3 nested fields. The array lengths are min: 1, average: 2.73, max: 11.

INSERTAR DOCUMENTOS

Para inserta un documento o un conjunto de documentos disponemos de los métodos:

- `insertOne`: Inserta un documento en una colección.
- `insertMany`: Inserta múltiples documentos en una colección.

CAMPO OBLIGATORIO _ID

- En MongoDB, cada documento almacenado en una colección requiere un único `_id` que actúa como clave principal . Si se inserta documento omite el `_id`, el controlador MongoDB automáticamente genera un `ObjectId` para el `_id`.

```
1 > db.student.find( {} )
```

```
2     collection name
```

```
3     empty query document
```

RECUPERAR DOCUMENTOS

OPERADORES COMPARACIÓN

- `$eq` - equal - igual
- `$lt` - low than - menor que
- `$lte` - low than equal - menor o igual que
- `$gt` - greater than - mayor que
- `$gte` - greater than equal - mayor o igual que
- `$ne` - not equal - distinto
- `$in` - in - dentro de
- `$nin` - not in - no dentro de

`db.collection.deleteOne()`
`db.collection.deleteMany()`
`db.collection.remove()`

ELIMINAR DOCUMENTOS Y BBDD

MODIFICAR UN ELEMENTO

```
> db.job.updateOne({salary:5000}, { $set: {firstName:'Morgan'}})
{ "acknowledged" : true, "matchedCount" : 1, "modifiedCount" : 1 }
> db.job.find().pretty()
{
  "_id" : ObjectId("6286f50681063f5a55d4775b"),
  "firstName" : "Morgan",
  "lastName" : "Dew",
  "email" : "john.dew@abc.com",
  "salary" : 5000
}
```

MODIFICAR MÚLTIPLES ELEMENTOS

```
db.users.updateMany(  
  { age: { $lt: 18 } },  
  { $set: { status: "reject" } }  
)
```

← collection
← update filter
← update action

OPERADORES LÓGICOS

CURSORES Y MÉTODOS

```
C:\Program Files\MongoDB\Server\4.0\bin\mongo.exe

...   precio: 45,
...   cantidad: 1
... }
... )
{ "acknowledged" : true, "insertedId" : 4 }
>
db.libros.find().sort({titulo:1})
{ "_id" : 3, "titulo" : "Aprenda PHP", "autor" : "Mario Molina", "editorial" : [ "Siglo XXI", "Planeta" ], "precio" : 50, "cantidad" : 20 }
{ "_id" : 1, "titulo" : "El aleph", "autor" : "Borges", "editorial" : [ "Siglo XXI", "Planeta" ], "precio" : 20, "cantidad" : 50 }
{ "_id" : 4, "titulo" : "Java en 10 minutos", "editorial" : [ "Siglo XXI" ], "precio" : 45, "cantidad" : 1 }
{ "_id" : 2, "titulo" : "Martin Fierro", "autor" : "Jose Hernandez", "editorial" : [ "Siglo XXI" ], "precio" : 50, "cantidad" : 12 }
>
```

RECUPERAR SOLO ALGUNOS CAMPOS

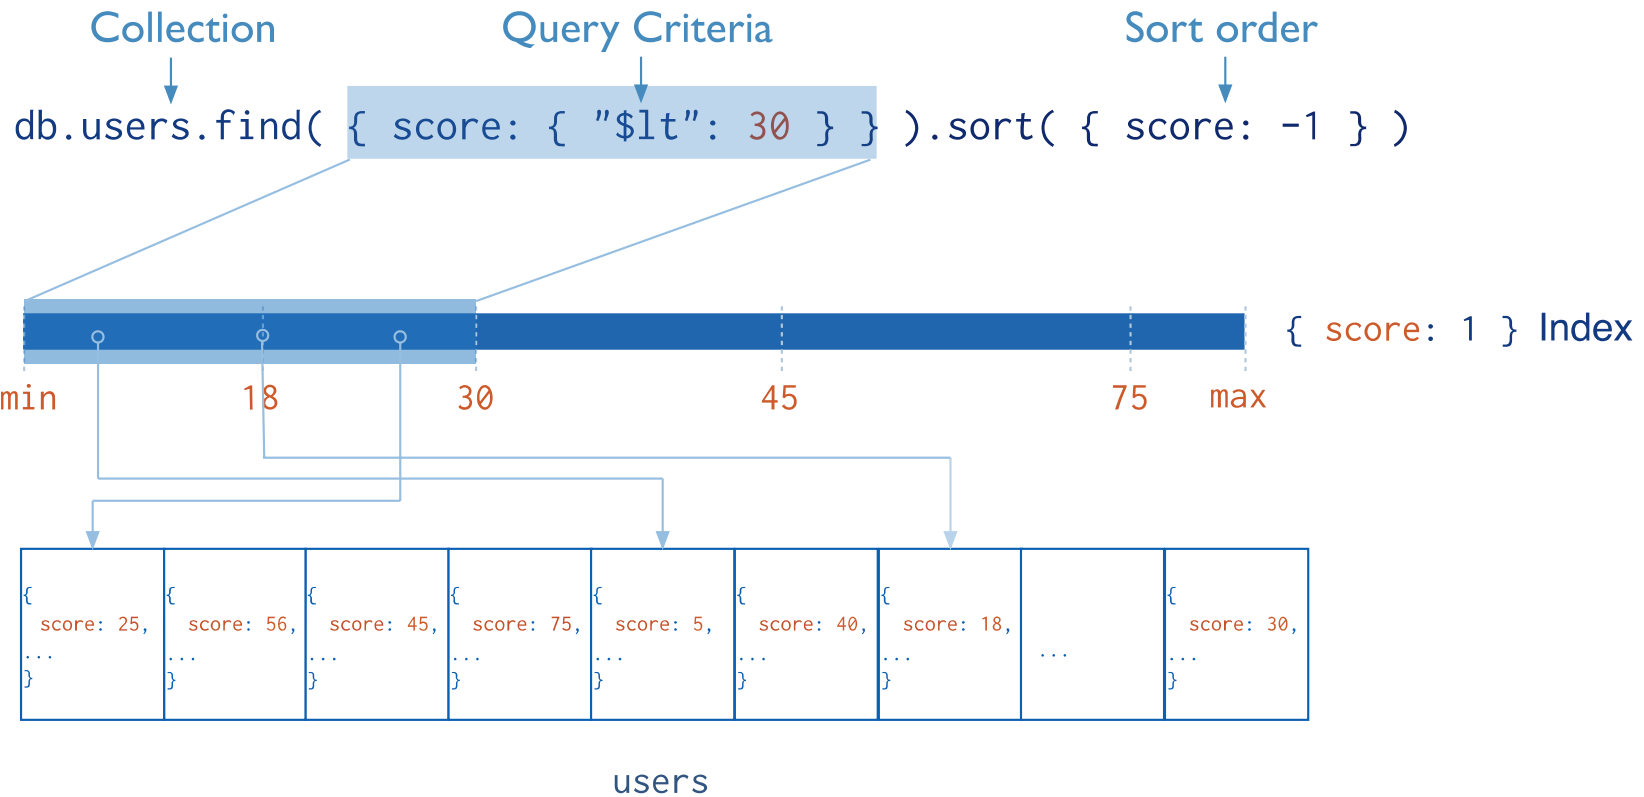

- Hemos visto que el método 'find':
 - Si no le pasamos parámetros nos retorna todos los documentos de la colección que hace referencia: `db.libros.find({precio: 50},{titulo:1,cantidad:1,_id:0})`
 - El primer parámetro en el caso que lo indiquemos filtra la colección y recupera los documentos que cumplen la condición
 - En el segundo parámetro del método 'find' debemos especificar cada campo y un valor 1 indicando que se lo quiere recuperar.

SQL Terms, Functions, and Concepts	MongoDB Aggregation Operators
WHERE	<code>\$match</code>
GROUP BY	<code>\$group</code>
HAVING	<code>\$match</code>
SELECT	<code>\$project</code>
ORDER BY	<code>\$sort</code>
LIMIT	<code>\$limit</code>
SUM()	<code>\$sum</code>
COUNT()	<code>\$sum</code> <code>\$sortByCount</code>
join	<code>\$lookup</code>
SELECT INTO NEW_TABLE	<code>\$out</code>
MERGE INTO TABLE	<code>\$merge</code> (Available starting in MongoDB 4.2)
UNION ALL	<code>\$unionWith</code> (Available starting in MongoDB 4.4)

MongoDB Data Model

ScaleBase Data Model

DATA MODEL

```
{
  _id: <ObjectId>,
  username: "123xyz",
  contact: {
    phone: "123-456-7890",
    email: "xyz@example.com"
  },
  access: {
    level: 5,
    group: "dev"
  }
}
```

Embedded sub-
document

Embedded sub-
document

DOCUMENTOS EMBEBIDOS

user document

```
{
  _id: <ObjectId1>,
  username: "123xyz"
}
```

contact document

```
{
  _id: <ObjectId2>,
  user_id: <ObjectId1>,
  phone: "123-456-7890",
  email: "xyz@example.com"
}
```

access document

```
{
  _id: <ObjectId3>,
  user_id: <ObjectId1>,
  level: 5,
  group: "dev"
}
```

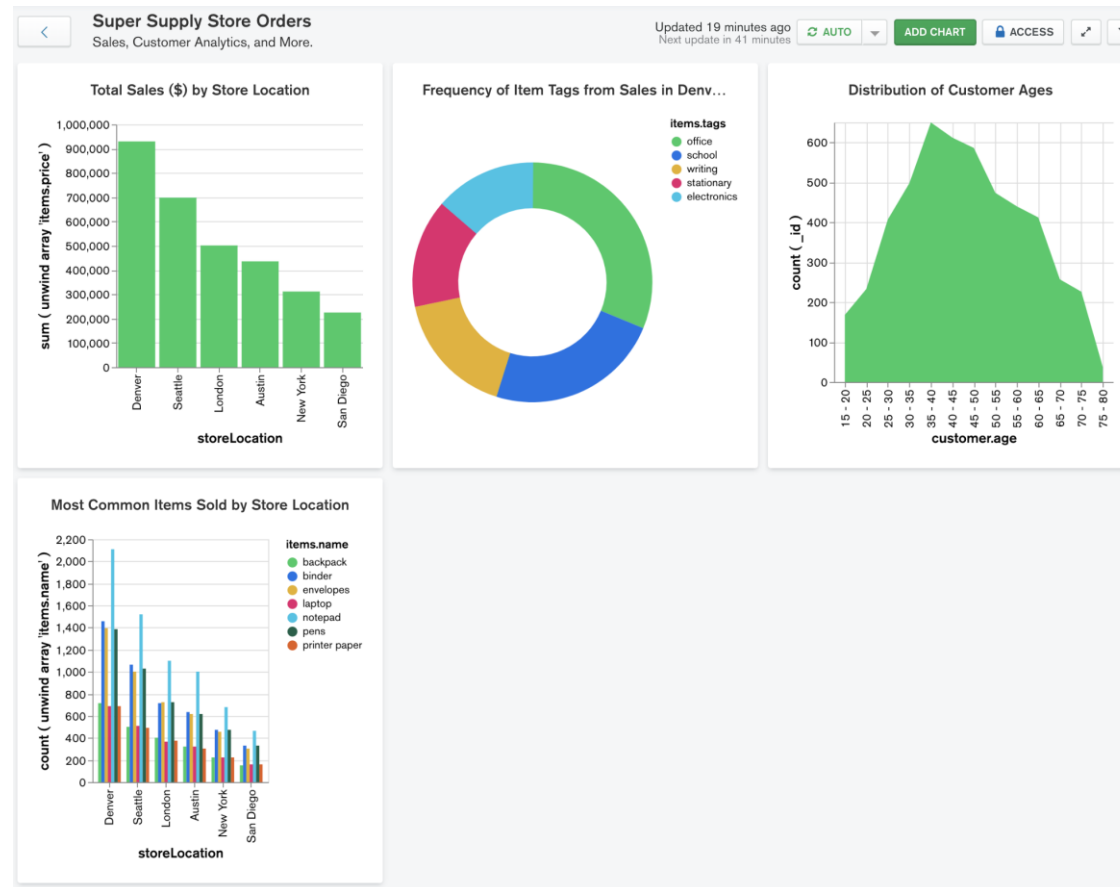

The diagram illustrates document references in a NoSQL database. It features three document boxes: 'user document', 'contact document', and 'access document'. The 'user document' has a field '_id: <ObjectId1>'. The 'contact document' has a field 'user_id: <ObjectId1>'. The 'access document' has a field 'user_id: <ObjectId1>'. Green arrows point from the 'user_id' field in both the 'contact document' and the 'access document' to the '_id' field in the 'user document', indicating that both documents reference the same user document.
